The biofuel are any fuel derived from the biomass. Principally the most used are the following:

- **Bio-ethanol:** Alcohol produced by the biological fermentation of the carbohydrates of vegetal material.
The ethanol is in use as solvent in industrial applications.
- **Biodiesel:** It is a synthetic fuel that is produced across vegetable oils, animal fats or recycled fat kitchen. It is obtained by means by trans-esterification, chemical process where two products, methylic ester and glycerine, they stem.

The crisis and the increase of the oil Price, it has created a growth in the present interest and future of the economic fuels. Barcelona is conscious of it from his beginnings always it has promoted the distribution of the chemical products for industrial groups and manufacturer plants of biodiesel and/or bioethanol, as well as the solar power companies and his by-products.
